"Assalamualaikum, my name is Inshara. I'm currently studying BS Artificial Intelligence at Hamdard University. I'm really passionate about tech, specially AI — I love exploring how it works. I've made a couple of projects in C and C++ during university, and these days I'm focusing more on Python and building my skills in that."

"As an AI student, I really want to explore tech deeply — especially programming languages and real-life applications. I want to go beyond theory and actually apply what I'm learning in a professional environment. This internship feels like a perfect step forward in my AI journey to grow and improve my practical skills."

I think one of my strengths is that I'm a quick learner — especially when it comes to coding or technical concepts. I also enjoy working in teams, and I'm the type of person who helps others if they're stuck — like explaining concepts to classmates.
As for my weakness, I tend to overthink when something doesn't go perfectly, and sometimes my communication isn't very strong in group situations — but I'm aware of it and actively working on improving.

Python is one of the easiest and most popular programming languages, and it's heavily used in AI — especially for things like machine learning, data handling, and automation. I'm still in the process of learning the deeper parts of Python in AI, so I won't say I know everything — but I'm working on it and excited to explore more."

I'd suggest an AI assistant that helps patients while they wait for their turn. For example, when a patient arrives, they can speak or type their name and symptoms into a small AI-powered system or kiosk. The assistant can guide them on what to expect, basic precautions, or maybe even share general advice while they wait for the doctor to be free. It could reduce stress for patients and also help hospital staff manage the flow.

I'd love to know — what kind of tasks or projects will we be working on during the internship?

🔲 **"Will we be working in teams or individually during the internship?"**

🔲 **"Is there any skill you recommend we should start preparing to perform better in this role?"**
